Title: US-10-020-139-2\_COPY\_159\_166

Perfect score: 46
Sequence: 1 ETDPQTHQ 8
Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5
Searched: 105224 seqs, 38719550 residues
Total number of hits satisfying chosen parameters: 1052
Minimum DB seq length: 0
Maximum DB seq length: 2000000000
Maximum Maximum Match 038
Post-processing: Minimum Match 1008
Listing first 45 summaries

Database : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

UDP-N-acctylmuramoylalanyl-D-glutamate--2,6-diaminopimelate ligase (EC 6.3.2.13) (UDP-N-acctylmuramyl-tripeptide synthetase) (Meso-diaminopimelate-adding enzyme) (UDP-MurNAc-tripeptide synthetase).
-:- PATHWAY: POLYUNSATURATED FATTY ACID BIOSYNTHESIS.
-:- SUBCELLULAR LOCATION: Endoplasmic reticulum.
-:- INDUCTION: BY AUXIN, ETHYLENE AND WOUNDING.
-!- DOMAIN: THE HISTIDINE BOX DOMAINS MAY CONTAIN THE ACTIVE SITE
-- ND/ OR BE INVOLVED IN METAL ION BINDING.
-- SIMILARITY: BELONGS TO THE FATTY ACID DESATURASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (BY SIMILARITY).

-!- FUNCTION: TRANSFERRINS ARE ITEN BINDING TRANSPORT PROTEINS WHICH
CAN BIND TWO ATOMS OF FERRIC IRON IN ASSOCIATION WITH THE BINDING
OF AN ANION, USUALLY BICARBONATE. IT IS RESPONSIBLE FOR THE
TRANSPORT OF IRON FROM SITES OF ABSORPTION AND HEME DEGRADATION
TO THOSE OF STORAGE AND UTILIZATION. SERUM TRANSFERRIN MAY ALSO
HAVE A FURTHER ROLE IN STIMULATING CELL PROLIFERATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The passent invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases quch as Alzheimer's disease, multiple sclerosis, schizophrenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human brain expressed single exon probe encoded protein SEQ ID NO: 34413.
                                                                                   liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Single exon nucleic acid probes for analyzing gene expression in human
                                                                           human foetal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

This sequence is the human parotid secretory protein (hPSP) of the invention. The hPSP DNA is useful for chromosome identification and isolation of the corresponding genomic DNA. The DNA and protein can be used to detect abnormal levels of hPSP (in standard blotting, amplification or immune assays), particularly for diagnosis of digestive, non-immune defensive, endocrine or immune system disorders. A particular application is diagnosis of cancers of the salivary gland, thymus and pancreas which are associated with high levels of hFSP. The protein is pancreas which are associated with high levels of hFSP. The protein is also useful as antifungal, antibacterial antiparasitic and antiviral agents and may be expressed in vivo from the DNA. The protein, or cells expressing it, are used in screening tests to identify specific (ant)agonists, e.g. antibodies (Ab), polypeptides and antisense nucleic acids, which are potentially useful for treating conditions associated in the recombinant protein and this can be used to raise Ab, useful for the diagnosis, therapy, for affinity purification and to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Parotid secretory protein; human; cancer; autoimmune disease; secretory tissue; gastrointestinal tissue; HPSP; Sjorgen's syndrome; Graves disease; thyroiditis; insulin-dependent diabetes; pancreatitis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           that bind specifically to, and modulate activity of HPSP are used to treat cancer and autoimmune diseases particularly of HPSP are used to treat cancer and autoimmune diseases particularly of secretory or astrointestinal tissue, e.g. cancer of salivary gland, thyroid, gastrointestinal tract or pancraas, Sjorgen's syndrome, grostate, breast, gastrointestinal tract or pancraas, Sjorgen's syndrome, grostate, breast, data at a strophic gastritis. Host cells containing expression vectors comprising the HPSP nucleic acid are used to produce recombinant HPSP which is used to generate antibodies and to screen for its antagonists, Antibodies are useful directly as antagonists, to transport drugs to HPSP-expressing cells, to detect cells that express HPSP from natural sources. Expression of HPSP and for purification of HPSP from natural sources. Expression of HPSP may indicate cell proliferation. HPSP nicleic acid or its fragments are used to detect HPSP-encoding sequences (optionally after amplification by PCR) by hypridisation, particularly for disposis and monitoring of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human: tumour; diagnosis; neoplastic disease; neoplastic cell growth; proliferation; tumourigenesis; identification; cancer; cytostatic; nootropic; neuroprotective; antiinflammatory; immunosuppressive; immunicatimulant; antianologenic; leukaemia; lymphoid malionancy; neuronal disorder; glial disorder; astrocytal disorder; angiogenic; hypothalamic disorder; glandular disorder; macrophagal disorder; profilelial disorder; stromal disorder; blastocoelic disorder; inflammatpry disorder; immunologic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This represents a human parotid secretory protein (HPSP).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a human secreted protein amino acid sequence.

The invention relates to sequences AAAA7725-A87774 which encode human secreted proteins that a proteins include signal peptides. Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for identifying features of the cDNA sequences using a computer programme. The cDNAs are useful for expressing secreted proteins to fragments to obtain antibodics capable of specifically binding to the secreted proteins. The cDNAs may also be useful in disquostic, foreasic, gene therapy and chromosome mapptung procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoinfmune diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological disorders, obesity, introchondriocytopathies, diabetes, atherosclerosis, neurodegenerative disorders, graft rejection, Alzheimer's disease, chementia, hyperlipidaemia, septic shock and impotence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to 49 Secreted proteins and the CDNAs encoding them. The protein and nucleic acids may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          49 Secreted proteins and the nucleic acids encoding them, useful in

AMA25965 The proteins can have activities based on the tissues and AMA25955 to AMA25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antitheumatic; antiarthritids they are expressed in, such as: antiinflammatory; antitheumatic; antiarthritid; immunosuppressive; antiapted; antimutagen; cardiovascular; antianaemic; antiagen; cardiovascular; antianaemic; antiadeptic; cutoratic; cutoratic; cutoratic; outloff antiabthric; osteopathic; dermatological; antiallergic; antiasthmatic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for production, The proteins and polynucleotides are useful for screening for a protein and polynucleotides are useful for screening for a folsorders associated with the activity of a protein e.g. inflammation, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fuggal infections, autoimmunity, quentic diseases, heematopoietic disorders, ontenial, and fundamia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, cancer, multiple sclerosis, depression, anintis, asthma, diabetes, cancer, multiple sclerosis, depression, anintalial and disease, neurodegenerative and anintal anit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated human polynucleotides encoding polypeptides, useful for the treatment and diagnosis of e.g. cancer, ulcers and HIV infection -

polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and apping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The configuration of (II). The configuration of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving or restore normal activity of (II) or to the react disease states involving and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful in medical inaging of sites expressing (II). (I) and (II) are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating the polypeptide and polymerical expression or biological activity. The polypeptide and polymerical esquences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and mino acid sequences. ABG00010-ABG00377 represent novel human when man and advances of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at Itp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human: chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
polypeptide (II) sequences (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques for sectors normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypurcleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Caps
                                                                                                                                                                                                                                                                                            New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome can gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for informing expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disconders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in dispnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG0010-ABG30377 represent novel human of the printed sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating alsolopeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating alsolopeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010 ABG3037 represent novel human data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the vir./pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

onlypeptide (II) sequences to isolated pulyidutioning in the into iterates to isolated pulyidutioning the control pulyidution tender to isolated pulyidutioning to polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polyidution contail activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving and the polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical insorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and cannon acid sequences. Abgoonto Addia and products dependent on DNA and amino acid sequences. Abgoonto Addia and products dependent on DNA and and amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              78.3%; Score 36; DB 22; Length 181;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
```

```
N.Alternate names: NP protein
C.Species: Influenza A virus
C.Date: 30.58p-1990 #sequence_revision 30-Sep-1990 #text_change 16-Jul-1999
C.Accession: G31470
R.Gammellin, M.; Mandler, J.; Scholtissek, C.
R.Gammellin, M.; Mandler, J.; Scholtissek, C.
A.Title: Two subtypes of nucleoproteins (NP) of influenza A viruses.
A.Reference number: A31470; MUID:89243210
A.Molecule type: genomic RNA
A.Rocession: G31470
A.Molecule type: genomic RNA
